Basic protective measures against bacteria and viruses

World Health Organization Recommended

1. Help prevent yourself and others becoming ill.

- Avoid close contact with others.
- Cover your mouth when sneezing.
- Throw away used tissues immediately.

World Health Organization Recommended

2. Wash your hands with soap and water.

- After sneezing,
- After caring for the sick,
- Before and during preparing food,
- Before eating,
- After using the toilet,
- After handling animals
- When they are visibly dirty.

World Health Organization Recommended

3. Use an alcohol based hand gel after washing your hands.

Use a sanitising alcohol hand gel after washing your hands.

Don't Forget!

60% of workplace illnesses are contracted from contaminated office equipment!

World Health Organization Recommended

4. Clean down surfaces regularly

- When someone whom is infected with a respiratory disease coughs or sneezes, they project small droplets containing the disease.
- Hands touch many surfaces daily, which can be a key vector of infection.

One-Step Cleaning
No Pre-cleaning required!

Effective up to **10x faster** than some competitor products.

Simply wipe a chosen surface, keeping the surface wet for 30 seconds for the anti-bacterial action to take effect.
